

ABSTRACT OF THE DISCLOSURE

A print headcap includes: a bottom surface; and a ring-like lip surrounding the bottom surface like a ring and protruding toward a nozzle surface of a print head of an ink jet printer and being elastically deformable. The ring-like lip is to be pressed onto the nozzle surface to cover the nozzle surface therewith. The ring-like lip has corners that change a direction of surrounding the bottom surface. The corners are more elastically deformable than the other portion of the ring-like lip.
